

## About Us

Welcome to the website of American Fish Tree Attractor & Handle, LLC

### American Fish Tree - 304SS Handle

The American Fish Tree handle assembly is made from 1/4" 304 stainless steel coiled rod. The light weight heavy duty patented handle allows for easy placement and portability for all American Fish Tree structures.

Our handle assembly is a unique feature for fish attractors because it gives the fisherman complete control of the fish attractor. The handle lets you:

- Safely deploy the fish attractor in a controlled descend;
- Move the fish attractor with changing water levels;
- Suspend the fish attractor from docks and piers;
- Mark or suspend the fish attractor with a floatation buoy;
- Or take the fish attractor out of service.

Our patented handle design makes the American Fish Tree fish attractor the most versatile fish attractor - for a lifetime.
